

2 wireless terminal communicates with a picture editor of another
3 wireless terminal so as to allow the user of the other wireless
4 terminal to participate in drawing a picture being created on
5 the wireless terminal, thereby allowing group drawing of
6 pictures.

1 23. The method of claim 21, wherein the picture editor provides
2 an interface in which a user uses keys of the numeric keypad of
3 the wireless terminal to draw or edit a picture, the interface
4 providing a virtual pen in that the numeric keys of the keypad
5 move a cursor about on the display screen of the wireless
6 terminal, and, based on a pen state a user is able indicate to
7 the picture editor interface, in moving the cursor from one
8 point on the display screen to another, either a solid line
9 results, a dashed line, a white line, or no line at all.

1 24. The method of claim 21, wherein the picture editor provides
2 an interface through which a user is able to add features to an
3 existing picture, invert an existing picture, or mirror an
4 existing picture.
